discovering the ocean from space

Some travelers are discovering the ocean’s vast, yet often secretive, world of biofluorescence—a seascape where fish glow in lime-green patterns, corals sway in neon hues, and shimmering see the ocean’s glow-in-the-dark world on a fluorescent night dive

Harvard astronomer Avi Loeb thinks alien technology could be on the ocean floor. And if he finds anything with buttons on it, he would very much like to press those buttons.

An exoplanet just 100 light-years from Earth appears to be the best candidate yet for a sloshy, water-covered ocean world.

we just found a ‘super-earth’ that could be an ocean-covered water world

Enceladus was discovered on August 28, 1789 by British astronomer William Herschel, more popular for discovering the planet were being supplied by a global ocean inside the moon.

enceladus and its endless secrets

Astronomers have discovered a nearby exoplanet that may prove to be the first such world covered in water. TOI-1452 b is an exoplanet slightly larger and more massive than Earth about 100 light years

astronomers find new, nearby planet that is entirely covered in water

Scientists have discovered a beautiful ocean world only 100 light-years away from Earth, and it could be perfect for supporting life.
